

Some people argue using a cleaner energy to protect the environment **is more effective**, but some people say the traditional energy sources such as coal and oil is less expensive, what is your suggestion.

Our society could never **survive** without energy as widely acknowledged. So when it comes the choice: cleaner energy or traditional energy, which is better for us, people's standpoints vary, with some insisting that traditional ones are better attributing to their low prices. However, scarcely can I agree with it.

开头段正确，并且表达了自己的观点，但是模版痕迹比较重，建议做一些改变，多加一些自己的话

First, the future of new energies is bright. New cleaner energy **is** generating tremendous benefits for our society. Wind power, which originated in Holland now is widely acknowledged and harnessed all over the world; solar energy ,which has been investigated for several decades, now can be found in ordinary people's household. Except for their large scale of **usage**, the most important aspect that deserves our attention is that our technology is so advanced that we could **almost** fully make use of them. Therefore, It is safe to say that their future is much brighter than we expected as our technology keeps marching forward.

段落结构不错，举例也比较高端，并不俗，这一段展开的很好

Second, new clean energies emit little pollutants into our environment. Take methane for example, high energy density and with the only remnant-water left behind when combusted. Not to mention the wind power or solar energy, which are capable of being converted directly into electricity and barely with **pollution**. In addition, they are renewable natural resources, which means they could be endlessly put into our power plants. 这里需要做一下展开，说说现在政府或者国家是怎样renew这些资源的，这段还需要再展开一些

Admittedly, traditional energies like oil and coal, are cheap and the relative technologies are fully developed, which no doubt would make it much more easy to harness those energy forms. And in fact, our society can not get rid of the impact they brought ,the impact of dramatically decreasing crude oil's price could testify my standpoint. However, when taking traditional energy's future into consideration, panic and stress arouse since they are doomed to be used up and we can not rely on them forever. What's more, the serious environmental consequences they incurred are worthy our attention. Therefore, there are ample evidences for us to pay attention to our clean and renewable energies.

这个让步段有一些overinformative。这里咱们只需要找到traditional的一个好处，然后加以批判就可以了，这样力度更强，但是现在你的让步段开头说到了traditional的各种好处，后期又没有一一驳倒，这样的让步段会比较无力。所以可以这样展开：

1. 诚然traditional便宜
  2. 例如：煤炭单价很低
  3. 但是：这些对于环境造成的影响都是不可逆的，并且也不是金钱可以衡量的
- 这里咱们只抓住cheap一点进行反驳，这样会更有效

To sum up, despite the low price of traditional energy resources ,more attention should be paid to new cleaner energy forms like wind power and solar radiation with a bright future.结尾段正确，没有问题

注意：

1. 段首顶格，段间空行
2. 注意细节补充【In addition, they are renewable natural resources, which means they could be endlessly put into our power plants. 这里需要做一下展开，说说现在政府或者国家是怎样renew这些资源的，这段还需要再展开一些】
3. 让步段尽量找一点，不要试图面面俱到，注意你让步开头列的越多，后面需要反驳的就越多
